CEO's Message

The remarkable advancements we are witnessing in the field of Artificial Intelligence, represents a significant breakthrough especially in natural language processing, enabling us to communicate and interact in a more intuitive and efficient manner.

First and foremost, I want to highlight that ChatGPT and similar AI tools are designed to augment human capabilities, not replace them. It also raises questions about the future of work and the need for upskilling. Hence, our focus should be on skilling and upskilling our workforce to adapt and thrive in this new AI-powered era.

While the emergence of AI technologies like ChatGPT opens up new possibilities for innovation and productivity. I believe it is essential for us to utilize this technology to the fullest and ensure that we are prepared for the changing landscape.

With AI taking over routine and repetitive tasks, we have an opportunity to focus on more complex and value-added work that requires human ingenuity. It is vital for us to identify these areas where our unique skills and expertise can shine and align our career paths accordingly.

Upskilling initiatives can also address the challenges associated with the adoption of AI technologies. For example, ICT Academy can provide training on data management, data privacy, and cybersecurity to ensure that individuals are equipped with the necessary skills to handle and protect sensitive data in AI-driven environments.

Overall, ICT Academy's focus on upskilling the next generation talent pool by embracing emerging technologies and preparing individuals for the jobs of the future.

This issue consists of reliable information, expert advice, and inspiring stories that will empower you to make choices that resonate with your passions and aspirations.

Let us continue to upskill the nation and make a lasting impact.

Hari Balachandran

Merits of being a life-long learner

Career Development

Lifelong learning provides individuals with the opportunity to acquire new skills, knowledge, and competencies, stay current with the latest trends, technologies, and best practices in their field through attending workshops, seminars, and conferences, which in turn enhances their employability and career prospects helping them advance in their careers.

Career doesn't mean only getting gainful employment; lifelong learning provides individuals with the skills and knowledge they need to start their own businesses too.

Personal Growth and Development

Lifelong learning enhances cognitive function, improves memory, and reduces risk of cognitive decline in older adults. This is because learning stimulates the brain and helps to keep it active and engaged.

As part of personal development, lifelong learning can help individuals to express themselves in new and creative ways with self-confidence.

Social Interaction

Lifelong learning fosters social interaction and creates a sense of community, sense of belonging, enhances communication and collaboration skills, builds social capital that can benefit individuals in their personal and professional lives by providing access to resources and opportunities.

Improved Health

Lifelong learning can have a positive impact on physical and mental health by reducing stress and promoting relaxation. Learning to engage in regular physical activities and self-care activities, such as meditation, yoga, or mindfulness practices could be helpful to maintaining overall well-being.

Self-Improvement

Lifelong learning can be a powerful tool for self-improvement, by exposing ourselves to our own strengths, weaknesses, and hinting to us with the areas for improvement, which is a prerequisite to set goals and achieve them. Needless to say, self-improvement starts from self-awareness.

DR. B. VINOTHKUMAR
ASSISTANT PROFESSOR
DEPARTMENT OF COMPUTER APPLICATIONS
AYYA NADAR JANAKI AMMAL COLLEGE
SIVAKASI

Real-world examples of lifelong learning can be seen in some of the most successful people in history. For instance, Thomas Edison, the inventor of the light bulb, held over 1,000 patents, many of which were in fields outside of his expertise. Similarly, Warren Buffett, one of the most successful investors in history, spends several hours each day reading and learning about new industries and technologies.

In conclusion, being a lifelong learner has numerous merits. It allows individuals to adapt to change, explore new interests, promote personal growth, advance their careers, and find greater job satisfaction. With the rapid pace of technological advancement and industry evolution, being a lifelong learner has become more critical than ever. So, whether you're just starting your career or are a seasoned professional, make a commitment to continuous learning and reap the benefits of being a lifelong learner.

Amarnath Alagappan is the Director, Head of Growth at Impacteers.club (Ti Steps pvt ltd), Chennai.

CHENNAI

Aids in identifying new interests:

Developing new abilities can lead to new options and opportunities. Students can grow interested in a subject they had never previously researched. Learning that is ongoing encourages innovation and creativity, enabling students to use their skills and knowledge in useful ways.

Builds self-confidence through mastery:

Most of the time, lifelong learning is a personal choice made by the student. Learning is effective when one is eager to learn new skills and excel at them. They are more likely to not only finish a course but also master it if they are actively pursuing a course, a new skill, or a hobby.

Helps learn practical skills

The mandatory courses and learning programs aside, lifelong learning teaches us practical skills. A college does not teach learners about every skill required in life. However, there are online platforms that offer a range of courses across subjects such as arts, science, engineering, technology, and management and more.

Increases the likelihood of job mobility

One of the key elements influencing learners to keep studying is job mobility. Possessing the most recent skills and technologies that employers are looking for increases one's chances of landing better employment possibilities. The learners can maintain their

competitiveness on the job market by participating in lifetime learning.

Improves adaptability

At first, learning something new could seem difficult. After their academic careers, however, students will always need to upskill their abilities with the latest skills and software. The learners will become accustomed to new technology more quickly if educational institutions adopt a culture of lifelong learning. Their willingness to learn new talents will grow as a result.

PERENNIAL LEARNING AND HOW IT HELPS TO ENDURE VAGARIES OF **ONE'S ECOSYSTEM**

A new, faster, more efficient way of doing things gains ground as the old way gradually phases out. New technology and platforms gain in popularity as the old ones start gathering dust. Hence, there is a need to take a detour at times, a need to unlearn some of the old skills, knowledge, and attitude, imbibe and reinforce new learnings and try new innovations.
