GENERATIVE AI'S HIDDEN THREATS

Generative AI — the technology powering tools like ChatGPT, Gemini, and Copilot — has become a daily companion for many of us. From writing emails and generating code to preparing lesson plans and reports, it feels like an extra pair of hands that never tires.

ASSISTANT PROFESSOR
JEPPIAAR COLLEGE OF ARTS AND SCIENCE

WHY INNER COHERENCE IS THE KEY TO THRIVING IN A COMPETITIVE WORLD

When individuals live in alignment with their true self, they form deeper and healthier relationships, resisting the shallow validation cycles of social media. Coherence sharpens clarity by minimizing inner conflict. A leader or professional with coherence is more decisive, less reactive, and more visionary.

THE BODY NEVER FORGETS

HEALING WHAT WORDS COULDN'T EXPRESS

**Now Listen to
Full Article**

When we were little children, we were all the same in essence — joyful, spontaneous, curious, and fully alive. We laughed from our bellies, cried without shame, and recovered quickly. We gave and received love freely, forgave easily, and lived entirely in the present moment, wide-eyed with wonder. Our breathing was open and natural — deep and rhythmic. We were connected to our bodies.

HOW STATISTICS IS POWERING INDIA'S GREEN FUTURE

The foundation of any green energy project is not laid in concrete, but in probability. Before a single rupee is invested in a massive solar farm, statisticians and data scientists are already at work. They analyze decades of historical weather data, satellite imagery, and ground-based measurements. This isn't just about knowing that a place is "sunny." It is about quantifying that sunniness.

VIRTUAL EMPLOYEES AT WORK

HOW AI IS TRANSFORMING TEAMS

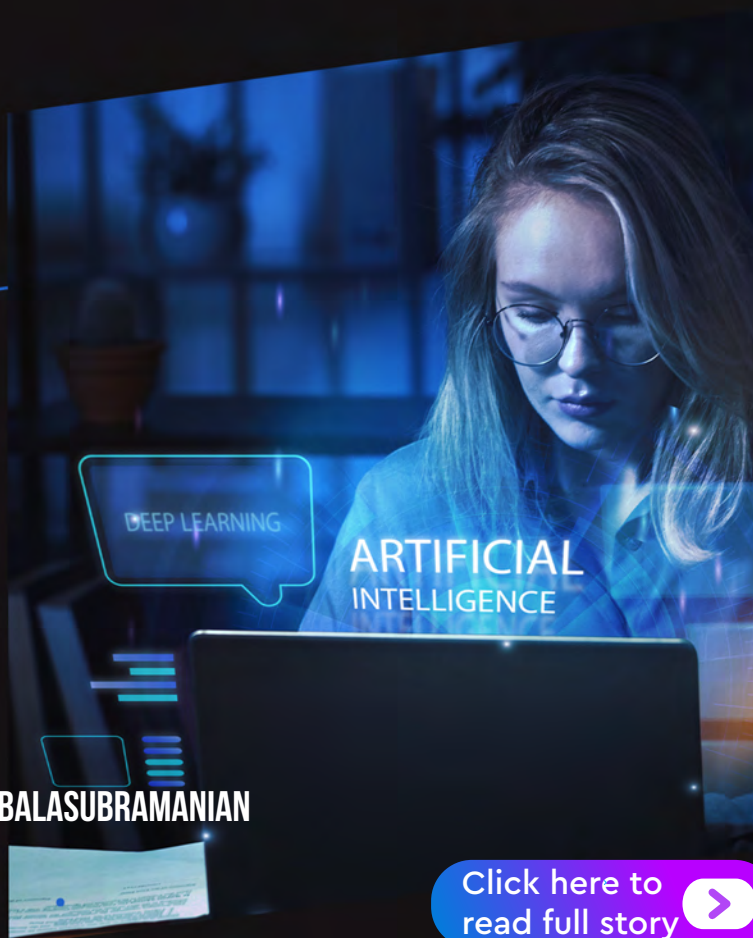

Today's virtual employees go far beyond basic assistance—they're vital contributors who deliver real-time insights, anticipate trends, and decode complex challenges. No longer in the background, these digital collaborators are at the forefront, powering smarter decisions and accelerating innovation. By weaving intelligent automation into daily routines, we enable more agile, inclusive, and impactful progress. That's why it's crucial for everyone—leaders, technologists, educators, and communities—to understand and embrace this shift, ensuring a future where technology empowers us all to achieve more, together.

BALANCING AUTOMATION WITH CREATIVITY

Global marketing practices in 2025 are all witnessing the growing integration of AI. Every endeavor in marketing has a tool to aid it. In all premises, from analytics to content generation to advertising, leaders in the marketing world are confronted with a conundrum to solve, an opportunity to grow and a responsibility to evolve.

IT THAT MATTERS

MEASURING SUCCESS BEYOND UPTIME AND SLAS

Now Listen to
Full Article

In today's digital-first world, where technology isn't just supporting the business but shaping it, measuring IT success solely by its reliability, it is like judging a car by whether its engine turns on; it misses the point of what the vehicle is actually meant to do.

TECH AS A MENTOR

AI PERSONALIZING LEARNING JOURNEYS

Now Listen to
Full Article

Sometimes, we just fail to see this new teammate of ours- as it works without a desk, doesn't need coffee breaks in between, and never asks for a day off. To improve operational excellence and augment scalability potential, both individuals and enterprises/teams must identify these cognitive computing systems that we are all interacting with on daily basis.

THE FUTURE OF IT SERVICE DELIVERY

AUTOMATION, AI, AND ALWAYS-ON OPERATION

Today software delivery has changed into a continuous, intelligent, and adaptive process. AI and automation are no longer side tools; they rest in the modern engineering system. From writing and reviewing the code to predicting deployment risks and monitoring production environments, AI-assisted delivery is redefining both the speed and the quality at which software reaches the end users.

THE \$600 MILLION OPPORTUNITY

MAPPING INDIA'S AGRITECH GROWTH TO 2029 AND BEYOND

In 2024, India's AgriTech market is valued at \$878 million. By 2029, annual investments are projected to reach \$600 million, while the sector as a whole is expected to surpass \$6 billion by 2033. The trajectory signals a sector on the cusp of maturity, attracting global capital while solving deeply local challenges.

INDIA AS AN EOR POWERHOUSE⁺

UNLOCKING GLOBAL WORKFORCE MOBILITY AT SCALE

Employees in India can be onboarded by EOR providers in India in as fast as less than 2 weeks. Such smooth streamlining combined with local expertise and an established working infrastructure is only possible by providers in this country as this is their sole business, and legally they are allowed to just be an institution on their own.

AI IN ACCOUNTING & FINANCE

Disrupting Routine, Empowering Strategy

Now Listen to
Full Article

Recently, I had the opportunity to attend an AI training session organized by our company, and it completely changed the way I view the future of accounting and finance. What fascinated me most was the power of using the right prompts to create simple yet effective AI codes that could automate tasks, reduce errors, and enhance accuracy. The possibilities are endless—and incredibly exciting

NEURAL ENTERPRISES BY 2030

GCCS AS THE DIGITAL BRAIN OF MULTINATIONAL CORPORATIONS

One of the most exciting trends is the rise of GCC nodes in Tier-2 and Tier-3 cities. These are not satellite offices; they are vital extensions, like peripheral nerves, creating a distributed, resilient, and scalable network. About 40% of GCC capacity is expected to reside in these emerging cities by 2030, delivering 20–30% lower operating costs and continuous, round-the-clock execution.

REIMAGINING EDUCATION

REFLECTIONS FROM INDIA'S ACADEMIC CORRIDORS

I have deep respect and appreciation for the EdTech companies that are doing a great job of bringing technology to schools and simplifying what was once cumbersome, such as manual data entry and report generation. However, the concern here is that very important areas of a learner's education are being put up for discussion, such as what kind of pedagogy works for Gen Z, Gen Alpha, and now Gen Beta, but the actual representatives who can give valuable and unfettered feedback are not at the table. Teachers who face the real challenges of various policies and new systems also lack representation.
