AI IN EDUCATION

A THINKING PARTNER, NOT A REPLACEMENT

For years, whenever I needed information, I would search for different sources and try to understand multiple perspectives. Even after AI became widely available, I never treated it as an answer machine. Instead, I used it as a collaborator to organize ideas, structure information, and challenge my own assumptions.

Harish S

Senior Project Management Officer,
Lab of Future

How to Disagree *Amicably*

Now Listen to
Full Article

A critical aspect of being receptive involves attentive listening. Often, when people disagree, we only half- listen to opposing opinions while thinking of the "strongest counterargument" we can put forth to get our views across. Further, Minson clarifies that the goal of receptiveness is not persuasion but to approach an issue with openness and curiosity and a willingness to gauge arguments with fairness, regardless of whether they support or dispel an idea.

Aruna Sankaranarayanan

Psychologist & Author

FACILITATING STUDENTS WITH LEARNING DISABILITIES IN A MAINSTREAM CLASSROOM

**Now Listen to
Full Article**

Educators need to accept the fact that learners in each classroom will have several differences. Learners will be within a given age range and may have a similar developmetal arc, but they will have varied developmental timelines, family environments, languages spoken at home, family exposures, cultures, and specific learning needs.

Nayana Kharosekar
Special Educator

The 'Quiet' Multiplier

WHY TECHNICAL BRILLIANCE ISN'T ENOUGH ANYMORE

If you are worried about the "extinction" of your career and questioning – "What's the differentiator?", stop looking for a more complex tool. Start looking for the one thing AI cannot replicate your humanity. You don't need a new certification. You just need the mastery of the "Human Multipliers."

Dr. Nagamani Krishnamurthy

Founder of Balavikasa Educational Academy

Women Empowerment in the Digital Age:

Opportunities, Challenges, and The Way Forward

Now Listen to
Full Article

Digital literacy is another important issue. Having access to technology is not enough if individuals do not know how to use it effectively. Some women lack the necessary digital skills to take advantage of educational and professional opportunities available online.

Transforming IT Operations: From Incident Response to Predictive Intelligence

Today's IT environments are distributed, hybrid, API-driven, and deeply interconnected. Business processes depend on multiple layers of infrastructure, applications, cloud platforms, data flows, integrations, and third-party services. A small delay in one system can ripple silently across many others before it becomes visible. By the time an alert is triggered or a user reports disruption, the issue may already have moved far beyond its starting point.

Venkatesh Sri Krishna Perumal

Executive Director – IT Operations, Dexian India

The New Sales Advantage: **AI-Powered Relationship Intelligence**

Every enterprise sales opportunity is, at its core, a relationship network. Deals advance because an internal champion advocates for the solution, stall because an influential detractor goes unnoticed, and are often lost because the individual who understood the customer's internal dynamics leaves the organization, taking that institutional knowledge with them.

Rohit Tiwari

Sr. Director – Sales & Marketing, Dexian India

INDIA'S INNOVATION DIVIDEND: How GCCs Are Accelerating the Global AI Revolution

Modern GCCs are becoming enterprise innovation centers where multidisciplinary teams develop AI-powered products, build intelligent automation platforms, design next-generation customer experiences, and create scalable digital solutions for global markets. Rather than supporting innovation from afar, India's GCCs are increasingly driving innovation from the front.

Kumar Rajagopalan

Vice President, Strategic Initiatives and
Country Head India

The AI Workforce Era:

REDEFINING LEADERSHIP, CULTURE, AND EMPLOYEE EXPERIENCE

For years, quantum computing was first as a physicist's thought experiment. Today, it has entered into reality. IBM has revealed processors with over a thousand qubits, Google is humanizing chips that reduce errors, and startups from Paris to Tokyo are experimenting with new qubit designs. Banks like HSBC have even tested quantum algorithms to improve bond trading estimates, showing how quantum power could one day change worldwide finance.

Reimagining Agri-Governance:

How Connected Intelligence Can Transform Rural Economies

Farmers gain access to better market information that supports informed selling decisions. Government agencies can monitor commodity movements, anticipate regional demand, and improve procurement planning. Supply chains become more efficient through improved logistics and inventory management, reducing post-harvest losses while improving food availability.

AI HAS CHANGED MARKETING FOREVER BUT TRUST STILL WINS CUSTOMERS

Customers are becoming more aware of how their data is collected, processed, and used. Personalization that lacks transparency can quickly create discomfort instead of loyalty. Organizations therefore face a delicate balancing act: delivering highly relevant experiences while respecting privacy, consent, and customer expectations.

AI SKILLS ARE RISING FAST.

Is Your Workforce Strategy Keeping Pace?

AI systems are now processing sensitive customer information, analyzing financial data, supporting healthcare decisions, generating software code, and influencing business strategy. Unlike traditional software, these systems continuously learn, evolve, and generate outputs that may not always be predictable.

Vishal Chaudhary

Executive Director-Dexian India

Planning for Volatility:

The New Role of Budgeting and Forecasting in Modern Finance

Now Listen to
Full Article

Finance functions have undoubtedly modernized their technology stacks. Cloud-based planning platforms, predictive analytics, AI-powered forecasting, and real-time dashboards are now common across enterprises. But technology alone has not solved the planning challenge. In many cases, organizations have simply digitized traditional budgeting processes without rethinking the purpose of planning itself.

The New Finance Control Room:

HOW AI, ERP, AND INTERNAL CONTROLS ARE REDEFINING F&A OPERATIONS

The modern finance control room brings together AI, ERP platforms, workflow intelligence, and internal controls into one connected operating model. It enables finance leaders to understand what is happening across transactions, exceptions, reconciliations, approvals, controls, and reporting cycles before issues become escalations.

Sathyanarayanan Kalyanasundaram

Executive Director, Shared Services – US Finance Controller
